“A tinkerer with a curious mind”

Summary

Infrastructure and reliability engineer with 7+ years building and operating cloud-native platforms. Maintained **99.99% uptime for systems serving 4M+ daily active users** while cutting infrastructure spend significantly. Strong background across Kubernetes, AWS/GCP/Azure, observability, and DevSecOps, with hands-on depth in networking, databases, storage, and multi-tenant SaaS operations. Comfortable owning incidents end-to-end and partnering with engineering and customer teams to ship reliable systems.

Experience

TrueFoundry

India

SENIOR SITE RELIABILITY ENGINEER

Sep. 2024 - Present

Own platform reliability, observability, incident response, and customer success for a multi-tenant SaaS platform serving enterprise ML workloads across AWS, GCP, Azure, and on-prem environments. Partner directly with global enterprise customers to ensure successful onboarding and long-term operational health.

- Built a modular **Terraform** framework that cut client onboarding time by **70%**, enabling deployment across AWS, Azure, GCP, and on-prem with minimal config changes; complemented by cloud Marketplace listings (AWS, GCP, Azure) that drove a **40% increase in self-service customer acquisition**.
- Migrated the platform’s logging stack from Grafana Loki to **VictoriaLogs**, cutting query latencies by **94%**, reducing storage footprint by **~40%**, and tripling ingestion throughput while halving CPU/RAM usage; published the methodology as a public engineering blog (*VictoriaLogs vs Loki – Benchmarking Results*).
- Led a platform-wide monitoring overhaul — bifurcating alerts into **P0/P1** severity tiers and migrating critical components to **New Relic** after a successful PoC, improving signal quality while keeping observability spend flat.
- Architected a severity-tiered incident management and on-call system integrating Sentry, Grafana, and New Relic with **Zenduty** and Slack, with team-wise alert routing across five functional domains, materially reducing MTTR and on-call noise.
- Drove infrastructure standardization across the fleet — consistent security contacts, Kubernetes labels/annotations, and resource conventions — and hardened the platform for multi-tenant SaaS through tighter tenant isolation, namespace-scoped **RBAC**, and resource governance on shared clusters.
- Serve as the escalation point for complex multi-cloud production debugging across EKS, GKE, and AKS — spanning Karpenter/autoscaling, EFS/CSI mounts, GPU node scheduling, IAM/IRSA, networking, and airgapped artifact registries — while keeping enterprise SLAs intact.
- Routinely support late-IST and weekend windows for onboarding, cluster upgrades, and live debugging with global enterprise customers (e.g., Riot Games, Zscaler), guiding teams through complex Kubernetes and cloud issues.

INFRASTRUCTURE LEAD (FOUNDING ENGINEER)

Feb. 2021 - Sep. 2024

Architected and operated AWS-based infrastructure on self-hosted Kubernetes that supported **4M DAU** with peak loads of **1M RPM**. Built out monitoring using RED and USE methodologies on Prometheus, Grafana, Elastic-APM, Pyroscope, Loki, and Robusta for proactive issue detection.

- Reduced annual cloud spend by **\$200K** via self-hosted services, efficient pod/node binpacking, spot-instance utilization, and trimming network flow logs and metrics volume.
- Designed and maintained highly available multi-broker **Apache Kafka** clusters and a multi-node **ELK Stack** on spot instances, ensuring data resilience while minimizing cost.
- Hardened cluster security through comprehensive network policies and **RBAC** configurations, materially reducing the attack surface.
- Cut deployment times to **under one minute** using self-hosted GitHub Runners on spot instances integrated with ArgoCD and Devtron.
- Expanded global reach by rolling out **IPv6** across the stack and integrating AWS Global Accelerator to reduce latency for international markets.
- Achieved **99.99% uptime** for stateless workloads running on **95% spot instances** via time-based scaling and node hibernation during low-traffic windows.
- Led integration of a full observability stack: centralized monitoring, APM, distributed tracing, logging, profiling, and alerting.

smallcase

India

DEVOPS ENGINEER

Feb. 2019 - Sep. 2020

Managed core infrastructure (OpenVPN, Heartbeat, Elastalert, Grafana) and integrated developer tooling (Wiki.js, Sentry, JFrog Artifactory). Built and maintained Ansible automation for deployments, log rotation, backups, and monitoring agents, and tuned CI/CD pipelines on Jenkins and AWS CodeDeploy.

- Drove infrastructure cost optimization that delivered a **90% reduction** in operational expenses while maintaining service quality.
- Implemented **HAProxy** load balancing to improve network performance and reduce application response times.
- Improved developer productivity by integrating open-source observability tools, including Elastic-APM, Kafka-manager, and Kafka-topics-ui.
- Designed fault-tolerant data infrastructure on multi-broker Apache Kafka clusters and a distributed ELK Stack running on spot instances.

Udacity

Remote

TECHNICAL MENTOR

Apr. 2018 - Present

- Mentor students in Android and Python Development; review project submissions and provide feedback to improve technical depth and code quality.

Utopian.io

Remote

OPEN SOURCE CONTRIBUTOR

Jun. 2018 - Jan. 2019

- Performed bug reviews and QA across multiple open-source projects, contributing to improved reliability and security alongside a global contributor community.

Skills

Cloud Platforms	AWS, Azure, GCP, Terraform, CloudFormation
Containerization	Kubernetes, Docker, Helm, Kustomize, ArgoCD, GitOps
Infrastructure	Infrastructure as Code (IaC), Linux, Ansible, Jenkins, GitHub Actions
Networking	Istio, Traefik, HAProxy, Load Balancing, RBAC, Network Policies, OpenVPN, IPv6
Observability	Prometheus, Grafana, Loki, ELK Stack, Elastic-APM, Tempo, Distributed Tracing
Data Systems	Apache Kafka, Redpanda, RabbitMQ, PostgreSQL, MySQL, Redis, Airbyte, dbt, Airflow, Spark
Programming	Python, Go, Bash, Git, CI/CD Pipelines

Education

Chitkara University

B.E. IN COMPUTER SCIENCE AND ENGINEERING

Punjab, India

2016 - 2020

- Graduated with **9.29 CGPA** (Distinction); specialization in Cyber-Security.
- Coursework: Distributed Systems, Network Security, Cloud Computing, Database Management, Operating Systems.

Honors & Awards

HACKATHONS

- | | | |
|------|---|----------------|
| 2024 | Winner , AWS GameDay: Security & Resilience (2x) | Bangalore |
| 2023 | Runner-up , AWS GameDay: Microservices | Bangalore |
| 2018 | Winner , MSHacks 2.0 – Microsoft Hackathon | LPU, Jalandhar |
| 2018 | Runner-up , Octahacks | Chandigarh |
| 2018 | Winner , Code Breakers | CSI Chandigarh |
| 2018 | Runner-up , SAP Next-Gen Hackathon | Chandigarh |
| 2017 | Runner-up , Codex C++ | CSI Punjab |

Certifications

Kubernetes Certifications

LINUX FOUNDATION

2021 – 2023

- CKS: Certified Kubernetes Security Specialist (LF-fty09fzmce, issued 2023)
- CKA: Certified Kubernetes Administrator (LF-bl5pcg30qm, issued 2021; renewed 2023)

AWS Certified Solutions Architect – Associate

AMAZON WEB SERVICES (AWS)

2019

- Credential ID: K71S1HB13NBEQT5N
- Designing distributed systems on AWS with a focus on cost-effective, scalable architectures.

Nanodegrees

UDACITY

2018

- Android Development – mobile application architecture and development.
- Data Structures – algorithms and computational efficiency.
- Python Foundation – backend development and automation.
- Programming Fundamentals – core software engineering principles.
